EDUCATION

Noida Institute of Engineering & Technology (NIET)

Greater Noida, India

B.Tech, Computer Science and Engineering (CGPA: 8.92)

2024 – 2028

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Software Engineering

SKILLS

Languages : Java, C++, Python, JavaScript, TypeScript

Backend Frameworks: Spring Boot, Node.js, FastAPI, WebSockets, REST APIs

Distributed Systems & Cloud : Kafka, Redis, PostgreSQL, Docker, AWS, Git, CI/CD

AI : LLMs, RAG, LangGraph, Agentic workflows

Practices : Agile, SDLC, Object-Oriented Programming (OOP), Design Patterns

PROJECTS

Automated Build & Deployment Pipeline | Source Code | Demo

- Deployed 20+ static Vite applications by engineering a cloud-native deployment platform that automates GitHub-to-production releases via isolated containerized build environments.
- Orchestrated real-time log streaming with sub-second latency through an asynchronous observability pipeline for concurrent deployment monitoring.
- Architected a metadata-driven reverse proxy for dynamic runtime subdomain resolution and application routing.
- *Tech stack: Node.js, Docker, AWS, PostgreSQL, Apache Kafka*

Video Transcoding Pipeline | Source Code | Demo

- Transcoded 45+ video media by building an asynchronous media pipeline that transforms raw uploads into streaming-ready renditions (360p/480p/720p)
- Designed a queue-driven worker architecture using AWS SQS and long-polling background workers to execute distributed transcoding jobs
- Optimized media delivery by publishing transcoded artifacts to S3 for scalable serving and downstream consumption.
- *Tech stack: Node.js, FFmpeg, Docker, AWS SQS, Amazon S3*

Offline P2P UPI Payment System | Source Code

- Developed an offline-first P2P payment system in Java and Spring Boot using object-oriented design principles.
- Implemented hybrid RSA/AES encryption to secure financial transaction packets propagated across an ad-hoc mesh network over 5 nodes.
- Eliminated duplicate transaction risk by 100% by designing an idempotent settlement mechanism via Spring Data JPA.
- *Tech stack: Java, Spring Boot, Spring Data JPA, Hybrid Encryption (RSA/AES)*

Multimodal Video-Ads Compliance Auditor | Source Code | Demo

- Audited 50+ video ads against FTC guidelines by building an automated compliance auditing system that analyzes speech, visuals, and on-screen text, generating structured compliance reports with supporting evidence.
- Developed a LangGraph-powered RAG workflow that performs policy validation over compliance documents, with end-to-end tracing, telemetry, and latency monitoring through LangSmith and Azure App Insights.
- *Tech stack: Python, FastAPI, Azure, LangGraph, LangSmith*

CODING PROFILE

Worked through 380+ algorithmic and system design problems across multiple coding platforms.

LeetCode: wakeupsam **GFG:** wakeupsam
