EDUCATION

Noida Institute of Engineering & Technology (NIET)

B.Tech, Computer Science and Engineering (CGPA: 8.92)

Greater Noida, India

2024 – 2028

PROJECTS

Automated Build & Deployment Pipeline | Source Code | Demo

- Built a cloud-native deployment platform that automates the deployment of GitHub repositories into live applications through isolated containerized build environments and object storage-backed hosting.
- Streamed deployment logs in real time through an asynchronous observability pipeline, enabling concurrent monitoring across multiple deployments.
- Implemented runtime-driven subdomain resolution through a reverse proxy that dynamically routes requests using deployment metadata rather than static configuration.
- *Technologies Used: Node.js, Docker, AWS, PostgreSQL, Apache Kafka*

Video Transcoding Pipeline | Source Code | Demo

- Built a media processing pipeline that transforms raw video uploads into streaming-ready renditions (360p/480p/720p) through asynchronous execution.
- Designed a queue-driven orchestration workflow where long-polling background workers dispatch isolated transcoding workloads for each uploaded video.
- Implemented a storage-centric media delivery model by publishing transcoded artifacts directly to S3 for downstream consumption.
- *Technologies Used: Node.js, FFmpeg, Docker, AWS S3, Amazon S3*

Offline P2P UPI Payment System | Source Code

- Developed an offline-first peer-to-peer UPI payment system using object-oriented design principles in Spring Boot that enables secure transactions by propagating encrypted payment packets across an ad-hoc mesh network until an internet-connected node becomes available.
- Implemented hybrid encryption and an idempotent transaction settlement mechanism using Spring Data JPA to prevent duplicate transaction processing and maintain transaction integrity during offline synchronization.
- *Technologies Used: Java, Spring Boot, Spring Data JPA, Hybrid Encryption (RSA/AES)*

Multimodal Video-Ads Compliance Auditor | Source Code | Demo

- Built an automated compliance auditing system to evaluate video ads against FTC guidelines by analyzing speech, visuals, and on-screen text, generating structured compliance reports with supporting evidence.
- Developed a LangGraph-powered RAG workflow that performs policy validation over compliance documents, with end-to-end tracing, telemetry, and latency monitoring through LangSmith and Azure App Insights.
- *Technologies Used: Python, FastAPI, Azure, LangGraph, LangSmith*

SKILLS

Languages : Java, C++, Python, JavaScript, TypeScript

Backend : Spring Boot, Node.js, FastAPI, REST APIs

Distributed Systems & Cloud : Kafka, Redis, PostgreSQL, Docker, AWS

AI : LLMs, RAG, LangGraph, Agentic workflows

Practices : Agile, Git, CI/CD

Core CS : Data structures and Algorithms, System Design, Distributed systems, OS, DBMS, Computer Networks

CODING PROFILE

Worked through 350+ questions spanning DSA and System Design, across multiple platforms.

LeetCode: wakeupsam **GFG:** wakeupsam
